

TO SUPPLY LEFTOVER FOOD TO POOR

Date	20-06-2025
Team ID	LTVIP2025TMID29611
Project Name	To Supply Leftover food to Poor
Maximum Marks	

Chapter 7

Functional and Performance Testing

7.1: Performance Testing (Trigger Testing)

Trigger Type	Example Scenario
User Action	Thousands of users are placing orders during a flash sale
Scheduled Job	Nightly batch processing of food donation records
External API Call	The NGO system syncs with the donor platform every 10 minutes
Database Event	Auto-cleanup or archiving of expired food listings
Notification Dispatch	Sending SMS/email alerts to hundreds of volunteers simultaneously

How to Test Triggers

- **Identify Critical Triggers:** Focus on events that initiate high-load or time-sensitive operations.
- **Simulate Trigger Conditions:** Use tools like JMeter or Locust to mimic the trigger and its resulting load.
- **Measure System Response:**
 - Latency and throughput
 - Resource utilization (CPU, memory, bandwidth)
 - Error rates or timeouts
- **Monitor Dependencies:** Check how third-party services or internal modules respond to the trigger.
